

Campo Morado Mine

Resources for a changing world

Operation at a glance

The Campo Morado mine is located in Guerrero State, Mexico. The area comprises 12,000 hectares in six mining concessions that are some 160 kilometers south-southwest of Mexico City.

Fast facts...

Location

– Campo Morado, Mexico

Mine Type

– underground multi-metal mine

Products

– zinc concentrate, copper concentrates, silver and gold as by-products

Employees

– 481

Production 2011

– 46,000 tonnes of zinc in concentrate
 5,200 tonnes of copper in concentrate
 17,000 troy ounces of gold in concentrate
 1,836,000 troy ounces of silver in concentrate*

OVERVIEW

In January 2011, Nyrstar successfully completed its acquisition of Farallon, the owner of the Campo Morado zinc-rich multi-metal mining operation in Mexico.

The Campo Morado operation comprises approximately 12,000 hectares in six mining concessions, located 160 kilometers south-southwest of Mexico City. The mineral deposit currently being mined is the G-9 deposit, which achieved commercial production in April 2009 and comprises high grade zinc, copper, lead, gold and silver. In addition to the G-9 Mine, there are four additional ore bodies that have been delineated as JORC compliant resources (Reforma, El Largo, El Rey and Naranjo).

In 2011, the Campo Morado operation produced 46,000 tonnes of zinc in concentrate, 5,200 tonnes of copper in concentrate, 1.8 million troy ounces of silver and 17,000 troy ounces of gold.

The Campo Morado mine had a C1 cash cost of USD 401 per tonne of payable zinc in 2011 due to significant by-product credits.

Nyrstar believes that there is significant exploration potential at the Campo Morado mine. Since taking control of Campo Morado, Nyrstar has focused the majority of its exploration activities on an accelerated in-fill drilling program to extend known mineral lenses.
