

SAFETY DATA SHEET

Based upon Regulation (EC) No 1907/2006, as amended by Regulation (EU) No 2020/878

NYRSTAR LEACH PRODUCT

SECTION 1: Identification of the substance/mixture and of the company/undertaking

1.1. Product identifier

Product name : NYRSTAR LEACH PRODUCT

Synonyms: leach residues, zinc ore, lead-contg.; NLP (Nyrstar Leach Product), BLP (Balen Leach Product), ALP (Auby Leach Product),

BuLP (Budel Leach Product)

Registration number REACH : 01-2119474886-19-0001 (Nyrstar Belgium NV/SA) 01-2119474886-19-0010 (Nyrstar Budel BV)

01-2119474886-19-0010 (Nyrstar Budel BV) 01-2119474886-19-0005 (Nyrstar France SAS)

Product type REACH : On-site isolated intermediate

: Transported isolated intermediate

CAS number : 91053-49-5 **EC number** : 293-314-4

1.2. Relevant identified uses of the substance or mixture and uses advised against

1.2.1 Relevant identified uses

The substance is defined as intermediate under Regulation (EC) No 1907/2006, not fulfilling the definition of strictly controlled conditions for which consequently an Article 10 (full) registration is required

IU1: production of the intermediate - During the hydrometallurgical production of zinc and/or zinc-compounds, leach residue and/or gascleaning residues concentrate the Pb- and/or other compounds from the feed. This material is extracted and isolated for further processing.

IU2: Handling and storage of the intermediate: Handling and temporary storage in bulk take place after production and before further processing of the intermediate

IU3: use of the intermediate - The material is unloaded, blended with other, primary and/or secondary materials, and loaded in smelting furnaces (ISA, Blast, convertor, ...) or similar, or in hydrometallurgical steps for further processing and extraction of non-ferrous metals (Pb, Ag, ...) and/or their compounds.

For more detailed information regarding the Identified Uses and the associated Exposure Scenarios: see attached annex

1.2.2 Uses advised against

No uses advised against known

1.3. Details of the supplier of the safety data sheet

Supplier of the safety data sheet

SECTION 2: Hazards identification

2.1. Classification of the substance or mixture

Classified as dangerous according to the criteria of Regulation (EC) No 1272/2008

Class	Category	Hazard statements
Carc.	category 1A	H350i: May cause cancer by inhalation.
Muta.	category 1B	H340: May cause genetic defects.
Repr.	category 1A	H360FD: May damage fertility. May damage the unborn child.
Acute Tox.	category 4	H332: Harmful if inhaled.
Acute Tox.	category 4	H302: Harmful if swallowed.
STOT RE	category 2	H373: May cause damage to organs (blood system, central nervous system, lungs, kidneys) through prolonged or repeated exposure.
Eye Dam.	category 1	H318: Causes serious eye damage.
Aquatic Acute	category 1	H400: Very toxic to aquatic life.
Aquatic Chronic	category 1	H410: Very toxic to aquatic life with long lasting effects.

2.2. Label elements

Signal word H-statements

H350i May cause cancer by inhalation. H340 May cause genetic defects.

H360FD May damage fertility. May damage the unborn child.

H302 + H332 Harmful if swallowed or if inhaled.

H373 May cause damage to organs (blood system, central nervous system, lungs, kidneys) through prolonged or

repeated exposure.

H318 Causes serious eye damage.

H410 Very toxic to aquatic life with long lasting effects.

P-statements

P280 Wear protective gloves, protective clothing and eye protection/face protection.

P260 Do not breathe dust.

P270 Do not eat, drink or smoke when using this product.

P304 + P340 IF INHALED: Remove person to fresh air and keep comfortable for breathing.

P305 + P351 + P338 IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do.

Continue rinsing.

P330 Rinse mouth.

P310 Immediately call a POISON CENTER/doctor.

Supplemental information

Restricted to professional users.

2.3. Other hazards

The criteria of PBT and vPvB as listed in Annex XIII of Regulation (EC) No 1907/2006 do not apply to inorganic substances

SECTION 3: Composition/information on ingredients

3.1. Substances

Name REACH Registration No	CAS No EC No	Conc. (C)	Classification according to CLP	Note	Remark	M-factors and ATE

⁽¹⁾ For H- and EUH-statements in full: see section 16

3.2. Mixtures

Not applicable

SECTION 4: First aid measures

4.1. Description of first aid measures

General:

Check the vital functions. Unconscious: maintain adequate airway and respiration. Respiratory arrest: artificial respiration or oxygen. Cardiac arrest: perform resuscitation. Victim conscious with laboured breathing: half-seated. Victim in shock: on his back with legs slightly raised. Vomiting: prevent asphyxia/aspiration pneumonia. Prevent cooling by covering the victim (no warming up). Keep watching the victim. Give psychological aid. Keep the victim calm, avoid physical strain. Depending on the victim's condition: doctor/hospital.

After inhalation:

Remove the victim into fresh air. Respiratory problems: consult a doctor/medical service.

After skin contact:

Rinse with water. Do not apply (chemical) neutralizing agents without medical advice. Take victim to a doctor if irritation persists.

After eye contact:

Rinse immediately with plenty of water for 15 minutes. Remove contact lenses, if present and easy to do. Continue rinsing. Do not apply (chemical) neutralizing agents without medical advice. Take victim to an ophthalmologist.

After ingestion:

Reason for revision: 14.8; 2020/878 Publication date: 2010-02-10
Date of revision: 2022-01-11

Revision number: 0600 BIG number: 32407 3 / 44

⁽²⁾ Substance with a Community workplace exposure limit

⁽⁴⁾ Enumerated in candidate list of substances of very high concern (SVHC) for authorisation (Article 59 of Regulation (EC) No. 1907/2006)

⁽¹⁰⁾ Subject to restrictions of Annex XVII of Regulation (EC) No. 1907/2006

Rinse mouth with water. Do not apply (chemical) neutralizing agents without medical advice. Consult a doctor/medical service if you feel

4.2. Most important symptoms and effects, both acute and delayed

4.2.1 Acute symptoms

After inhalation:

AFTER INHALATION OF FUME: FOLLOWING SYMPTOMS MAY APPEAR LATER: Metal fume fever. Feeling of weakness. Body temperature rise. Headache. Nausea. Vomiting. Metal taste. Muscular pain. Rapid respiration. Respiratory difficulties. Possible oedema of the upper respiratory tract. Risk of lung oedema. Respiratory collapse.

After skin contact:

No effects known.

After eye contact:

Corrosion of the eye tissue. Inflammation/damage of the eye tissue.

After ingestion:

AFTER INGESTION OF HIGH QUANTITIES: Metal taste. Dry/sore throat. Nausea. Vomiting. Abdominal pain. Feeling of weakness. Headache.

4.2.2 Delayed symptoms

No effects known.

4.3. Indication of any immediate medical attention and special treatment needed

If applicable and available it will be listed below.

SECTION 5: Firefighting measures

5.1. Extinguishing media

5.1.1 Suitable extinguishing media:

Adapt extinguishing media to the environment for surrounding fires.

5.1.2 Unsuitable extinguishing media:

Not applicable.

5.2. Special hazards arising from the substance or mixture

On heating (>1000°C): release of toxic and corrosive gases/vapours (lead oxides, sulphur oxides, zinc oxides).

5.3. Advice for firefighters

5.3.1 Instructions:

Dilute toxic gases with water spray. Take account of toxic/corrosive precipitation water. Take account of toxic fire-fighting water. Use water moderately and if possible collect or contain it.

5.3.2 Special protective equipment for fire-fighters:

Gloves (EN 374). Safety glasses (EN 166). Protective clothing (EN 14605 or EN 13034). Dust cloud production: self-contained breathing apparatus (EN 136 + EN 137). Heat/fire exposure: self-contained breathing apparatus (EN 136 + EN 137).

SECTION 6: Accidental release measures

6.1. Personal precautions, protective equipment and emergency procedures

Prevent dust cloud formation. No naked flames.

6.1.1 Protective equipment for non-emergency personnel

See section 8.2

6.1.2 Protective equipment for emergency responders

Gloves (EN 374). Safety glasses (EN 166). Protective clothing (EN 14605 or EN 13034). Dust cloud production: self-contained breathing apparatus (EN 136 + EN 137).

Suitable protective clothing

See section 8.2

6.2. Environmental precautions

Contain released product, collect/pump into suitable containers. Plug the leak, cut off the supply. Dam up the solid spill. Knock down/dilute dust cloud with water spray. Prevent soil and water pollution. Prevent spreading in sewers.

6.3. Methods and material for containment and cleaning up

Prevent dust cloud formation. Scoop solid spill into closing containers. Carefully collect the spill/leftovers. Clean contaminated surfaces with an excess of water. Take collected spill to manufacturer/competent authority. Wash clothing and equipment after handling.

6.4. Reference to other sections

See section 13.

SECTION 7: Handling and storage

The information in this section is a general description. If applicable and available, exposure scenarios are attached in annex. Always use the relevant exposure scenarios that correspond to your identified use.

7.1. Precautions for safe handling

Avoid raising dust. Keep away from naked flames/heat. Observe very strict hygiene - avoid contact. Remove contaminated clothing immediately. Do not discharge the waste into the drain. Avoid dehydratation. Keep container tightly closed.

7.2. Conditions for safe storage, including any incompatibilities

7.2.1 Safe storage requirements:

Reason for revision: 14.8; 2020/878

Storage temperature: -15 °C - 35 °C. Meet the legal requirements.

Revision number: 0600 BIG number: 32407

Publication date: 2010-02-10
Date of revision: 2022-01-11

4 / 44

7.2.2 Keep away from:

Heat sources.

7.2.3 Suitable packaging material:

No data available

7.2.4 Non suitable packaging material:

No data available

7.3. Specific end use(s)

If applicable and available, exposure scenarios are attached in annex. See information supplied by the manufacturer.

SECTION 8: Exposure controls/personal protection

8.1. Control parameters

8.1.1 Occupational exposure

a) Occupational exposure limit values

If limit values are applicable and available these will be listed below.

ΕU

Arsenic acid and its salts, as well as inorganic arsenic compounds	Time-weighted average exposure limit 8 h (Indicative occupational exposure limit value)	0.01 mg/m³ (12)
Cadmium and its inorganic compounds	Time-weighted average exposure limit 8 h (Indicative occupational exposure limit value)	0.001 mg/m³ (10)
Calcium dihydroxide	Time-weighted average exposure limit 8 h (Indicative occupational exposure limit value)	1 mg/m³ (2)
	Short time value (Indicative occupational exposure limit value)	4 mg/m³ (2)
Inorganic lead and its compounds	Time-weighted average exposure limit 8 h (Binding occupational exposure limit value)	0.15 mg/m ³
Manganese and inorganic manganese compounds (as manganese)	Time-weighted average exposure limit 8 h (Indicative occupational exposure limit value)	0.05 mg/m³ (2)
	Time-weighted average exposure limit 8 h (Indicative occupational exposure limit value)	0.2 mg/m ³ (1)
Tin (inorganic compounds as Sn)	Time-weighted average exposure limit 8 h (Indicative occupational exposure limit value)	2 mg/m³

^{(12):} Inhalable fraction. For the copper smelting sector, the limit value shall apply from 11 July 2023

Belgium

Time-weighted average exposure limit 8 h	1 mg/m³
Time-weighted average exposure limit 8 h	0.01 mg/m ³
Time-weighted average exposure limit 8 h	5 mg/m³
Time-weighted average exposure limit 8 h	0.002 mg/m ³
Time-weighted average exposure limit 8 h	0.001 mg/m³
Time-weighted average exposure limit 8 h	0.004 mg/m ³
Time-weighted average exposure limit 8 h	1 mg/m³
Short time value	4 mg/m³
Time-weighted average exposure limit 8 h	10 mg/m³
Time-weighted average exposure limit 8 h	2 mg/m³
Time-weighted average exposure limit 8 h	0.2 mg/m ³
Time-weighted average exposure limit 8 h	0.15 mg/m ³
Time-weighted average exposure limit 8 h	10 mg/m ³
	Time-weighted average exposure limit 8 h Short time value Time-weighted average exposure limit 8 h Time-weighted average exposure limit 8 h Time-weighted average exposure limit 8 h Time-weighted average exposure limit 8 h

The Netherlands

	Time-weighted average exposure limit 8 h (Public occupational exposure limit value)	0.004 mg/m³
1	Time-weighted average exposure limit 8 h (Public occupational exposure limit value)	0.33 ppm

Reason for revision: 14.8; 2020/878

Publication date: 2010-02-10

Date of revision: 2022-01-11

Revision number: 0600 BIG number: 32407 5 / 44

^{(10):} Inhalable fraction. Limit value 0,004 mg/m3 until 11 July 2027. Respirable fraction in those Member States that implement, on the date of the entry into force of this Directive, a biomonitoring system with a biological limit value not exceeding 0,002 mg Cd/g creatinine in urine.

^{(2):} Respirable fraction

^{(1):} Inhalable fraction

Calcium-dihydroxide	Time-weighted average exposure limit 8 h (Public occupational exposure limit value)	1 mg/m³
	Short time value (Public occupational exposure limit value)	1.3 ppm
	Short time value (Public occupational exposure limit value)	4 mg/m³
n water onoplosbare zouten van arseenzuur (als As)	Time-weighted average exposure limit 8 h (Public occupational exposure limit value)	0.0028 mg/m ³
Koper en anorganische koperverbindingen inhaleerbaar)	Time-weighted average exposure limit 8 h (Public occupational exposure limit value)	0.1 mg/m ³
ood en anorganische loodverbindingen	Time-weighted average exposure limit 8 h (Public occupational exposure limit value)	0.15 mg/m ³
Mangaan en anorganische mangaan-verbindingen (als mangaan)	Time-weighted average exposure limit 8 h (Public occupational exposure limit value)	0.05 mg/m ³
	Time-weighted average exposure limit 8 h (Public occupational exposure limit value)	0.2 mg/m ³
Fin (anorganische verbindingen als Sn)	Time-weighted average exposure limit 8 h (Public occupational exposure limit value)	2 mg/m³

France

rance		
Aluminium (trioxyde de di-)	Time-weighted average exposure limit 8 h (VL: Valeur non réglementaire indicative)	10 mg/m³

8.1.5 Control banding

If applicable and available it will be listed below.

8.2. Exposure controls

The information in this section is a general description. If applicable and available, exposure scenarios are attached in annex. Always use the relevant exposure scenarios that correspond to your identified use.

8.2.1 Appropriate engineering controls

Avoid raising dust. Keep away from naked flames/heat. Measure the concentration in the air regularly. Carry operations in the open/under local exhaust/ventilation or with respiratory protection.

8.2.2 Individual protection measures, such as personal protective equipment

Observe very strict hygiene - avoid contact. Do not eat, drink or smoke during work.

a) Respiratory protection:

Dust production: dust mask with filter type P3. High dust production: self-contained breathing apparatus (EN 136 + EN 137).

b) Hand protection:

Protective gloves against chemicals (EN 374), Gloves always need to be selected in consultation with the supplier after analysing the specific operating conditions. The glove thickness and breakthrough time can vary per manufacturer, type and model of glove. The technical information of the glove manufacturer always needs to be consulted to ensure the most suitable glove is chosen for each task. The table below serves as an indication and is in compliance with norm EN-420 and EN-374 and other norms, that can be concluded from the risk analysis of the specific operation conditions.

Materials	Measured breakthrough time	Thickness	Protection index	Remark
PVC	> 30 minutes	1.5 mm	Class 2	
butyl rubber	> 120 minutes	0.5 mm	Class 4	
viton	> 480 minutes	0.4 mm	Class 6	

c) Eye protection:

Safety glasses (EN 166). In case of dust production: protective goggles (EN 166).

d) Skin protection:

Dustproof clothing (EN 13982).

8.2.3 Environmental exposure controls:

See sections 6.2, 6.3 and 13

SECTION 9: Physical and chemical properties

9.1. Information on basic physical and chemical properties

Physical form	Solid
Odour	Mild odour
Odour threshold	Not applicable
Colour	Grey-brown
Particle size	No data available (test not performed)
Explosion limits	No data available (test not performed)
Flammability	Not classified as flammable
Log Kow	Not applicable
Dynamic viscosity	Not applicable (solid)
Kinematic viscosity	Not applicable (solid)

9.2. Other information

Evaporation rate	Not applicable (solid)

SECTION 10: Stability and reactivity

10.1. Reactivity

Acid reaction. Not corrosive to metals.

10.2. Chemical stability

Stable under normal conditions.

10.3. Possibility of hazardous reactions

No data available.

10.4. Conditions to avoid

Precautionary measures

Avoid raising dust. Keep away from naked flames/heat.

10.5. Incompatible materials

No data available.

10.6. Hazardous decomposition products

On heating (>1000°C): release of toxic and corrosive gases/vapours (lead oxides, sulphur oxides, zinc oxides).

SECTION 11: Toxicological information

11.1. Information on hazard classes as defined in Regulation (EC) No 1272/2008

11.1.1 Test results

Acute toxicity

SECTION 13: Disposal considerations

The information in this section is a general description. If applicable and available, exposure scenarios are attached in annex. Always use the relevant exposure scenarios that correspond to your identified use.

13.1. Waste treatment methods

13.1.1 Provisions relating to waste European Union

Reason for revision: 14.8; 2020/878 Publication date: 2010-02-10
Date of revision: 2022-01-11

Revision number: 0600 BIG number: 32407 30 / 44

Hazardous waste according to Directive 2008/98/EC, as amended by Regulation (EU) No 1357/2014 and Regulation (EU) No 2017/997. Waste material code (Directive 2008/98/EC, Decision 2000/0532/EC).

01 03 07* (wastes from physical and chemical processing of metalliferous minerals: other wastes containing hazardous substances from physical and chemical processing of metalliferous minerals). Depending on branch of industry and production process, also other waste codes may be applicable.

13.1.2 Disposal methods

Remove waste in accordance with local and/or national regulations. Hazardous waste shall not be mixed together with other waste. Different types of hazardous waste shall not be mixed together if this may entail a risk of pollution or create problems for the further management of the waste. Hazardous waste shall be managed responsibly. All entities that store, transport or handle hazardous waste shall take the necessary measures to prevent risks of pollution or damage to people or animals. Do not discharge into drains or the environment. Dispose of at authorized waste collection point. Do not discharge into surface water (Directive 2000/60/EC, Council Decision 2455/2001/EC).

13.1.3 Packaging/Container

European Union

Waste material code packaging (Directive 2008/98/EC).

15 01 10* (packaging containing residues of or contaminated by dangerous substances).

.CH Candidate list Contains component(s) ind 1907/2006)	cluded in candidate list of sub	ostances of very high o	concern (SVHC) for authorisation (Article 59 of Regulation (EC) No

Contains component(s) subject to restrictions of Annex XVII of Regulation (EC) No 1907/2006: restrictions on the manufacture, placing on the market and use of certain dangerous substances, mixtures and articles.

	Designation of the substance, of the group of substances or of the mixture	Conditions of restriction
· lead(II)sulphate	Lead sulphates; PbSO 4	Shall not be placed on the market, or used, as substances or in mixtures, where the substance or mixture is intended for use as paint. However, Member States may, in accordance with the provisions of International Labour Organization (ILO) Convention 13, permit the use on their territory of the substance or mixture for the restoration and maintenance of works of art and historic buildings and their interiors, as well as the placing on the market for such use. Where a Member State makes use of this derogation, it shall inform the Commission thereof.
· iron arsenate	Arsenic compounds	1.Shall not be placed on the market, or used, as substances or in mixtures where the substance or mixture is intended for use to prevent the fouling by micro-organisms, plants or animals of: — the hulls of boats, — cages, floats, nets and any other appliances or equipment used for fish or shellfish farming, — any totally or partly submerged appliances or equipment. 2. Shall not be placed on the market, or used, as substances or in mixtures where the substance or mixture is intended for use in the treatment of industrial waters, irrespective of their use. 3. Shall not be used in the preservation of wood. Furthermore, wood so treated shall not

The first and second subparagraphs apply without prejudice to Council Directive 94/62/EC (OJ L 365, 31.12.1994, p. 10) and acts adopted on its basis.

By 19 November 2012, in accordance with Article 69, the Commission shall ask the European Chemicals Agency to prepare a dossier conforming to the requirements of Annex XV in order to assess whether the use of cadmium and its compounds in plastic material, other than that listed in subparagraph 1, should be restricted.

2. Shall not be used or placed on the market in paints with codes [3208] [3209] in a concentration (expressed as Cd metal) equal to or greater than 0,01 % by weight. For paints with codes [3208] [3209] with a zinc content exceeding 10 % by weight of the paint, the concentration of cadmium (expressed as Cd metal) shall not be equal to or greater than 0,1 % by weight.

Painted articles shall not be placed on the market if the concentration of cadmium (expressed as Cd metal) is equal to or greater than 0,1 % by weight of the paint on the painted article.

- 3. By way of derogation, paragraphs 1 and 2 shall not apply to articles coloured with mixtures containing cadmium for safety reasons.
- 4. By way of derogation, paragraph 1, second subparagraph shall not apply to:
- mixtures produced from PVC waste, hereinafter referred to as "recovered PVC",
- mixtures and articles containing recovered PVC if their concentration of cadmium (expressed as Cd metal) does not exceed 0,1 % by weight of the plastic material in the following rigid PVC applications:
- (a) profiles and rigid sheets for building applications;
- (b) doors, windows, shutters, walls, blinds, fences, and roof gutters;
- (c) decks and terraces;
- (d) cable ducts;
- (e) pipes for non-drinking water if the recovered PVC is used in the middle layer of a multilayer pipe and is entirely covered with a layer of newly produced PVC in compliance with paragraph 1 above. Suppliers shall ensure, before the placing on the market of mixtures and articles containing recovered PVC for the first time, that these are visibly, legibly and indelibly marked as follows: "Contains recovered PVC" or with the following pictogram:

Pictogram recovered PVC

In accordance with Article 69 of this Regulation, the derogation granted in paragraph 4 will be reviewed, in particular with a view to reducing the limit value for cadmium and to reassess the derogation for the applications listed in points (a) to (e), by 31 December 2017. 5. For the purpose of this entry, "cadmium plating" means any deposit or coating of metallic cadmium on a metallic surface. Shall not be used for cadmium plating metallic articles or components of the articles used in the following sectors/applications:
a) equipment and machinery for:

- food production [8210] [8417 20] [8419 81] [8421 11] [8421 22] [8422] [8425] [8437] [8438] [8476 11]
- agriculture [8419 31] [8424 81] [8432] [8433] [8434] [8436]
- cooling and freezing [8418] printing and book-binding [8440] [8442] [8443] (b) equipment and machinery for the production of:
- household goods [7321] [8421 12] [8450] [8509] [8516]
- furniture [8465] [8466] [9401] [9402] [9403] [9404]
- sanitary ware [7324]
- central heating and air conditioning plant [7322] [8403] [8404] [8415]

In any case, whatever their use or intended final purpose, the placing on the market of cadmium-plated articles or components of such articles used in the sectors/applications listed in points (a) and (b) above and of articles manufactured in the sectors listed in point (b) above is prohibited.

- 6. The provisions referred to in paragraph 5 shall also be applicable to cadmium-plated articles or components of such articles when used in the sectors/applications listed in points (a) and (b) below and to articles manufactured in the sectors listed in (b) below:
- (a) equipment and machinery for the production of:
- paper and board [8419 32] [8439] [8441] textiles and clothing [8444] [8445] [8447] [8448] [8449] [8451] [8452]
- (b) equipment and machinery for the production of:
- industrial handling equipment and machinery [8425] [8426] [8427] [8428] [8429] [8430] [8431]
- road and agricultural vehicles [chapter 87]
- rolling stock [chapter 86]
- vessels [chapter 89].
- 7. However, the restrictions in paragraphs 5 and 6 shall not apply to:
- articles and components of the articles used in the aeronautical, aerospace, mining, offshore and nuclear sectors whose applications require high safety standards and in safety devices in road and agricultural vehicles, rolling stock and vessels,
- electrical contacts in any sector of use, where that is necessary to ensure the reliability required of the apparatus on which they are installed.
- 8. Shall not be used in brazing fillers in concentration equal to or greater than 0,01 % by weight. Brazing fillers shall not be placed on the market if the concentration of cadmium (expressed as Cd metal) is equal to or greater than 0,01 % by weight. For the purpose of this paragraph brazing shall mean a joining technique using alloys and undertaken at temperatures above 450 °C.
- By way of derogation, paragraph 8 shall not apply to brazing fillers used in defence and aerospace applications and to brazing fillers used for safety reasons.
- 10. Shall not be used or placed on the market if the concentration is equal to or greater than 0,01 % by weight of the metal in:
- (i) metal beads and other metal components for jewellery making;
- (ii) metal parts of jewellery and imitation jewellery articles and hair accessories, including:
- bracelets, necklaces and rings,

piercing jewellery,

			(d) artists' paints covered by Regulation (EC) No 1272/2008; (e) the substances listed in Appendix 11, column 1, for the applications or uses listed in
			Appendix 11, column 2. Where a date is specified in column 2 of Appendix 11, the
			derogation shall apply until the said date;
			(f) devices covered by Regulation (EU) 2017/745.
	· lead(II)sulphate	Lead and its compounds	Shall not be placed on the market or used in any individual part of jewellery articles if the concentration of lead (expressed as metal) in such a part is equal to or greater than 0,05 %
			by weight.
			2. For the purposes of paragraph 1:
			(i) "jewellery articles" shall include jewellery and imitation jewellery articles and hair
			accessories, including: (a) bracelets, necklaces and rings;
			(b) piercing jewellery;
			(c) wrist watches and wrist-wear;
			(d) brooches and cufflinks; (ii) "any individual part" shall include the materials from which the jewellery is made, as well
			as the individual components of the jewellery articles.
			3. Paragraph 1 shall also apply to individual parts when placed on the market or used for
			jewellery-making.
			4. By way of derogation, paragraph 1 shall not apply to: (a) crystal glass as defined in Annex I (categories 1, 2, 3 and 4) to Council Directive
			69/493/EEC (*);
			(b) internal components of watch timepieces inaccessible to consumers;
			(c) non-synthetic or reconstructed precious and semiprecious stones (CN code 7103, as established by Regulation (EEC) No 2658/87), unless they have been treated with lead or its
			compounds or mixtures containing these substances;
			(d) enamels, defined as vitrifiable mixtures resulting from the fusion, vitrification or sintering
			of minerals melted at a temperature of at least 500 °C. (*) OJ L 326, 29.12.1969, p. 36.
			5. By way of derogation, paragraph 1 shall not apply to jewellery articles placed on the market for the first time before 9 October 2013 and jewellery articles produced before 10
			December 1961.
			6. By 9 October 2017, the Commission shall re-evaluate paragraphs 1 to 5 of this entry in the
			light of new scientific information, including the availability of alternatives and the migration
			of lead from the articles referred to in paragraph 1 and, if appropriate, modify this entry accordingly.
			7. Shall not be placed on the market or used in articles supplied to the general public, if the
			concentration of lead (expressed as metal) in those articles or accessible parts thereof is
			equal to or greater than 0,05 % by weight, and those articles or accessible parts thereof may, during normal or reasonably foreseeable conditions of use, be placed in the mouth by
			children.
			That limit shall not apply where it can be demonstrated that the rate of lead release from
			such an article or any such accessible part of an article, whether coated or uncoated, does
			not exceed 0,05 µg/cm2 per hour (equivalent to 0,05 µg/g/h), and, for coated articles, that the coating is sufficient to ensure that this release rate is not exceeded for a period of at
			least two years of normal or reasonably foreseeable conditions of use of the article.
			For the purposes of this paragraph, it is considered that an article or accessible part of an
			article may be placed in the mouth by children if it is smaller than 5 cm in one dimension or has a detachable or protruding part of that size.
			8. By way of derogation, paragraph 7 shall not apply to:
			(a) jewellery articles covered by paragraph 1;
			(b) crystal glass as defined in Annex I (categories 1, 2, 3 and 4) to Directive 69/493/EEC; (c) non-synthetic or reconstructed precious and semi-precious stones (CN code 7103 as
			established by Regulation (EEC) No 2658/87) unless they have been treated with lead or its
			compounds or mixtures containing these substances;
			(d) enamels, defined as vitrifiable mixtures resulting from the fusion, vitrification or sintering
			of mineral melted at a temperature of at least 500 °C; (e) keys and locks, including padlocks;
			(f) musical instruments;
			(g) articles and parts of articles comprising brass alloys, if the concentration of lead
			(expressed as metal) in the brass alloy does not exceed 0,5 % by weight; (h) the tips of writing instruments;
			(i) religious articles;
			(j) portable zinc-carbon batteries and button cell batteries;
			(k) articles within the scope of: (i) Directive 94/62/EC;
			(ii) Regulation (EC) No 1935/2004;
			(iii) Directive 2009/48/EC of the European Parliament and of the Council (*);
			(iv) Directive 2011/65/EU of the European Parliament and of the Council (**)
			9. By 1 July 2019, the Commission shall re-evaluate paragraphs 7 and 8(e), (f), (i) and (j) of this entry in the light of new scientific information, including the availability of alternatives
			and the migration of lead from the articles referred to in paragraph 7, including the
			requirement on coating integrity, and, if appropriate, modify this entry accordingly.
			10. By way of derogation paragraph 7 shall not apply to articles placed on the market for the first time before 1 June 2016.
			(*) Directive 2009/48/EC of the European Parliament and of the Council of 18 June 2009 on
			the safety of toys (OJ L 170, 30.6.2009, p. 1).
			(**) Directive 2011/65/EU of the European Parliament and of the Council of 8 June 2011 on
			the restriction of the use of certain hazardous substances in electrical and electronic equipment (OJ L 174, 1.7.2011, p. 88).
			11. Doing either of the following acts after 15 February 2023 in or within 100 metres of
			wetlands is prohibited:
_		l	<u> </u>
200	son for revision: 14.8: 2020/878		Publication date: 2010-02-10

Reason for revision: 14.8; 2020/878

Publication date: 2010-02-10

Date of revision: 2022-01-11

Revision number: 0600 BIG number: 32407 38 / 44

(a) discharging gunshot containing a concentration of lead (expressed as metal) equal to or greater than 1 % by weight; (b) carrying any such gunshot where this occurs while out wetland shooting or as part of

going wetland shooting.

For the purposes of the first subparagraph:

(a) "within 100 metres of wetlands" means within 100 metres outward from any outer boundary point of a wetland;

(b) "wetland shooting" means shooting in or within 100 metres of wetlands:

(c) if a person is found carrying gunshot in or within 100 metres of wetlands while out shooting or as part of going shooting, the shooting concerned shall be presumed to be wetland shooting unless that person can demonstrate that it was some other type of

The restriction laid down in the first subparagraph shall not apply in a Member State if that Member State notifies the Commission in accordance with paragraph 12 that it intends to make use of the option granted by that paragraph.

12. If at least 20 % in total of the territory, excluding the territorial waters, of a Member State are wetlands, that Member State may, in place of the restriction laid down in the first subparagraph of paragraph 11, prohibit the following acts throughout the whole of its territory from 15 February 2024:

(a) the placing on the market of gunshot containing a concentration of lead (expressed as metal) equal to or greater than 1 % by weight;

(b) the discharging of any such gunshot;

(c) carrying any such gunshot while out shooting or as part of going shooting.

Any Member State intending to make use of the option granted by the first subparagraph shall notify the Commission of this intention by 15 August 2021. The Member State shall communicate the text of the national measures adopted by it to the Commission without delay and in any event by 15 August 2023. The Commission shall make publicly available without delay any such notices of intention and texts of national measures received by it. 13. For the purposes of paragraphs 11 and 12:

(a) "wetlands" means areas of marsh, fen, peatland or water, whether natural or artificial, permanent or temporary, with water that is static or flowing, fresh, brackish or salt, including areas of marine water the depth of which at low tide does not exceed 6 metres; (b) "gunshot" means pellets used or intended for use in a single charge or cartridge in a shotgun;

(c) "shotgun" means a smooth-bore gun, excluding airguns;

(d) "shooting" means any shooting with a shotgun;

(e) "carrying" means any carrying on the person or carrying or transporting by any other means:

(f) in determining whether a person found with gunshot is carrying gunshot "as part of going shooting"

(i) regard shall be had to all the circumstances of the case;

(ii) the person found with the gunshot need not necessarily be the same person as the person shooting.

14. Member States may maintain national provisions for protection of the environment or human health in force on 15 February 2021 and restricting lead in gunshot more severely than provided for in paragraph 11.

The Member State shall communicate the text of those national provisions to the Commission without delay. The Commission shall make publicly available without delay any such texts of national provisions received by it.

cadmium sulphate

The substances listed in column 1 of the Table

in Appendix 12

1. Shall not be placed on the market after 1 November 2020 in any of the following:

(a) clothing or related accessories;

(c) footwear:

(b) textiles other than clothing which, under normal or reasonably foreseeable conditions of use, come into contact with human skin to an extent similar to clothing;

if the clothing, related accessory, textile other than clothing or footwear is for use by consumers and the substance is present in a concentration, measured in homogeneous material, equal to or greater than that specified for that substance in Appendix 12.

2. By way of derogation, in relation to the placing on the market of formaldehyde [CAS No 50-00-0] in jackets, coats or upholstery, the relevant concentration for the purposes of paragraph 1 shall be 300 mg/kg during the period between 1 November 2020 and 1 November 2023. The concentration specified in Appendix 12 shall apply thereafter.

3. Paragraph 1 shall not apply to:

(a) clothing, related accessories or footwear, or parts of clothing, related accessories or footwear, made exclusively of natural leather, fur or hide;

(b) non-textile fasteners and non-textile decorative attachments:

(c) second-hand clothing, related accessories, textiles other than clothing or footwear (d) wall-to-wall carpets and textile floor coverings for indoor use, rugs and runners.

4. Paragraph 1 shall not apply to clothing, related accessories, textiles other than clothing, or

footwear within the scope of Regulation (EU) 2016/425 of the European Parliament and of the Council (*) or Regulation (EU) 2017/745 of the European Parliament and of the Council

5. Paragraph 1(b) shall not apply to disposable textiles. 'Disposable textiles' means textiles that are designed to be used only once or for a limited time and are not intended for subsequent use for the same or a similar purpose.

6. Paragraphs 1 and 2 shall apply without prejudice to the application of any stricter restrictions set out in this Annex or in other applicable Union legislation.

7. The Commission shall review the exemption in paragraph 3(d) and, if appropriate, modify that point accordingly.

(*) Regulation (EU) 2016/425 of the European Parliament and of the Council of of 9 March 2016 on personal protective equipment and repealing Council Directive 89/686/EEC (OJ L

15.2. Chemical safety assessment

A chemical safety assessment has been performed.

SECTION 16: Other information

Full text of any H- and EUH-statements referred to under section 3:

H301 Toxic if swallowed.

H302 Harmful if swallowed.

H315 Causes skin irritation.

H318 Causes serious eye damage.

H330 Fatal if inhaled.

H331 Toxic if inhaled.

H332 Harmful if inhaled.

H335 May cause respiratory irritation.

H340 May cause genetic defects.

H350 May cause cancer.

H350i May cause cancer by inhalation.

H360Df May damage the unborn child. Suspected of damaging fertility.

 ${\it H360FD} \quad {\it May damage fertility.} \ {\it May damage the unborn child.}$

H372 Causes damage to organs through prolonged or repeated exposure.

H373 May cause damage to organs (brain) through prolonged or repeated exposure if inhaled.

H373 May cause damage to organs through prolonged or repeated exposure.

H373 May cause damage to organs (blood system, central nervous system, lungs, kidneys) through prolonged or repeated exposure.

H400 Very toxic to aquatic life.

H410 Very toxic to aquatic life with long lasting effects.

H411 Toxic to aquatic life with long lasting effects.

1. Exposure scenarios

1.1. Exposure scenario 1: production of the intermediate

Full title: Industrial isolation of the Intermediate Leach.Pb.residue (<u>293-314-4</u>), from Zincmetallurgical leaching and gascleaning steps, by settling, filtering and other hydrometallurgical processes.

Table 1. Exposure scenario 1 for the intermediate Pb-leach residue.

Exposure Scenario Format (1) addressing uses carried out by workers

<u>Title of exposure scenario Leach.Pb.residue 1</u>: Industrial isolation of the Intermediate Leach.Pb.residue (<u>293-314-4</u>), from Zinc-metallurgical leaching and gascleaning steps, by settling, filtering and other hydrometallurgical processes.

List of all use descriptors related to the life cycle stage and all the uses under it; include market sector (by PC), if relevant;

SU: 3, 8, 14

PROC: 2, 3, 8b, 9, 26

PC: 19

AC: not applicable

ERC: 1

Further explanations (if needed)

During the hydrometallurgical production of zinc and/or zinc-compounds, unleached residue and/or gascleaning residues -'Leach.Pb.residue'-concentrate the Pb-compounds from the feed; they are extracted and isolated for further processing in production units of Lead metal or Lead compounds.

Exposure Scenario

1.1.1 Contributing scenario (1) controlling environmental exposure for the Industrial isolation of the Intermediate Leach.Pb.residue (293-314-4), from Zinc-metallurgical leaching and gas cleaning steps, by settling, filtering and other hydrometallurgical processes.

Further specification:

- Solutions from leaching tanks or gas-cleaning washing towers may contain unleached material, steriles and insoluble sulphates, i.e. Lead- and calcium-sulphate.
- Separation of those solids occurs in semi-closed settlers and, further if needed, the leachate may be filtered on adapted filters,
- Further storage outside, in covered "loges", after press-filtering i.o.t. reduce the moisture to 25-35%.
- Occasionally, the filtercake may be treated in a rotary dryer
- Transfer of the Pb-rich Intermediate occurs in big-bags or containers or covered bulk load trucks, according to applicable regulation
- This Intermediate is typically used in production units of Lead metal or Lead compounds. (EC 231-100-4)

Publication Date: 2014-04-14 Date of Revision: 2017-10-24

Annex – page 1

Maintenance activities

Product characteristics

Product related conditions:

The Leach. Pb residue is a wet filtercake with an average Lead-content of 15-70% w/w

Amounts used

Daily and annual amount per site:

maximum 400000 T/y

Frequency and duration of use

Continuous production

Environment factors not influenced by risk management

Flow rate of receiving surface water:

Default is used unless specified otherwise

Other given operational conditions affecting environmental exposure

Other given operational conditions: e.g. technology or process techniques determining the initial release of substance from process (via air and waste water); dry or water based processes; conditions related to temperature and pressure; indoor or outdoor use of products; work in confined area or open air;

Typically hydrometallurgical process steps: leaching tanks, settlers, filters

Potential dryers are operated under strong aspiration (negative pressure towards atmospheric pressure)

- Besides the process waters, some non-process waters can be generated containing zinc (e.g. from cleaning)
- All processes are performed in a confined area. All residues containing zinc/Lead are recycled.

Technical conditions and measures at process level (source) to prevent release

Process design aiming to prevent releases and hence exposure to the environment; this includes in particular conditions ensuring rigorous containment; performance of the containment to be specified (e.g. by quantification of a release factor in section 9.x.2 of the CSR);

- Process enclosures and closed circuits where relevant and possible.
- Containment of liquid volumes in sumps to collect/prevent accidental spillage, acid solutions are treated adequately.

Technical onsite conditions and measures to reduce or limit discharges, air emissions and releases to soil

Technical measures, e.g. on-site waste water and waste treatment techniques, scrubbers, filters and other technical measures aiming at reducing releases to air, sewage system, surface water or soil; specify effectiveness of measures; specify the size of industrial sewage treatment plant (m3/d), degradation effectiveness and sludge treatment (if applicable);

- On-site waste water treatment techniques can be applied to prevent releases to water (if applicable) e.g.: chemical precipitation, sedimentation and filtration (efficiency 90-99.98%).
- Containment of liquid volumes in sumps to collect/prevent accidental spillage
- Air emissions are controlled by use of cyclones, baghouse filters, scrubbers,

nýrstar

Publication Date: 2014-04-14 Date of Revision: 2017-10-24

Annex – page 2

demisters and/or other air emission abatement devices e.g. filters (up to 99% efficiency), wet scrubbers (50-99% efficiency). This may create a general negative pressure at the system openings (loading, sampling, production exit).

Organizational measures to prevent/limit release from site

Specific organisational measures or measures needed to support the functioning of particular technical measures.

• In general, emissions are controlled and prevented by implementing an integrated management system e.g. ISO 9000, ISO 1400X series, or alike, and, when applicable, by being IPPC-compliant (cf. NFM-BREF).

Such management system should include general industrial practice like e.g.:

- The substance/ UVCB is rigorously contained by technical means during the whole lifecycle including manufacture, purification, cleaning/maintenance of equipment, sampling, analysis, loading and unloading of equipment or vessels, waste disposal or purification and storage
- Procedural and control technologies shall be used that minimise emission and any resulting exposure
- Only properly trained and authorised personnel handles the substance
- For cleaning/maintenance, special procedures such as system purging and washing before opening devices
- Procedures, control technologies for accidents and waste
- Substance-handling procedures well documented and strictly supervised
- Treatment and monitoring of releases to outside air, and exhaust gas streams (process & hygiene), according to national regulation.
- SEVESO 2 compliance, if applicable

Conditions and measures related to municipal sewage treatment plant

Size of municipal sewage system/treatment plant (m3/d); specify degradation effectiveness; sludge treatment technique (disposal or recovery); measures to limit air emissions from sewage treatment (if applicable); please note: the default size of the municipal STP (2000 m_3/d) will be rarely changeable for downstream uses.

In cases where applicable: default size, unless specified otherwise.

Conditions and measures related to external treatment of waste for disposal

Fraction of used amount transferred to external waste treatment for disposal; type of suitable treatment for waste generated by work-ers uses, e.g. hazardous waste incineration, chemical-physical treatment for emulsions, chemical oxidation of aqueous waste; specify effectiveness of treatment;

If any, all hazardous wastes are treated by certified contractors according to EU and

nyrstar

Annex – page 3 Publication Date: 2014-04-14 Date of Revision: 2017-10-24

national legislation.

Conditions and measures related to external recovery of waste

Fraction of used amount transferred to external waste treatment for recovery: specify type of suitable recovery operations for waste generated by workers uses, e.g. re-distillation of solvents, refinery process for lubricant waste, recovery of slags, heat recovery out-side waste incinerators; specify effectiveness of measure;

- All residues formed during the leaching process and gascleaning system, are recovered and either recycled in the system or handled further according the waste legislation.
- Users of Zn/Pb and Zn/Pb-compounds, have to favour the recycling channels of the end-of-life products
- Users of Zn/Pb and Zn/Pb-compounds have to minimize Zn/Pb-containing waste, promote recycling routes and, for the remaining, dispose the waste streams according the Waste regulation.

1.1.2 Contributing scenario (2) controlling worker exposure for the Industrial isolation of the Intermediate Leach Pb residue (293-314-4), from Zinc-metallurgical leaching and gascleaning steps, by settling, filtering and other hydrometallurgical processes.

Name of contributing scenario 2:

During the hydrometallurgical production of zinc and/or zinc-compounds, unleached residue and/or gascleaning residues -'Leach.Pb.residue'-concentrate the Pb-compounds from the feed; they are extracted and isolated for further processing in production units of Lead metal or Lead compounds.

Further specification

Product characteristic

Product related conditions, e.g. the concentration of the substance in a mixture, the physical state of that mixture (solid, liquid; if solid: level of dustiness), package design affecting exposure)

- The substance/ UVCB is a wet filtercake,
- With occasional (sampling, cleaning, maintenance) and potentially direct exposure for workers
- The average Zinc content lies between 20-55% W/W and Lead content between 20-70% w:w
- Copper compounds (up to 10% w/w Pb) and Cadmium compounds (up to 10% w/w Cd) are possibly present

Amounts used

Amounts used at a workplace (per task or per shift); note: sometimes this information is not needed for assessment of worker's expo-sure

Maximum 1200 T/day, 400T/shift

Annex – page 4 Publication Date: 2014-04-14 Date of Revision: 2017-10-24

Frequency and duration of use/exposure

Duration per task/activity (e.g. hours per shift) and frequency (e.g. single events or repeated) of exposure

8hrs shift

Human factors not influenced by risk management

Particular conditions of use, e.g. body parts potentially exposed as a result of the nature of the activity

Uncovered body parts: (potentially) face

Other given operational conditions affecting workers exposure

Other given operational conditions: e.g. technology or process techniques determining the initial release of substance from process into workers environment; room volume, whether the work is carried out outdoors/indoors, process conditions related to temperature and pressure.

- All processes are carried out in confined areas with a minimum of operators
- The process is managed and controlled from a separate control-room.

Technical conditions and measures at process level (source) to prevent release

Process design aiming to prevent releases and hence exposure of workers; this in particular includes conditions ensuring rigorous containment; performance of containment to be specified (e.g. by quantification of residual losses or exposure)

- Local exhaust ventilation on work areas with potential dust/aerosols generation, dust capturing and removal techniques
- Process enclosures closed circuits or semi-enclosures where appropriate.
- Containment of liquid volumes in sumps to collect/prevent accidental spillage

Technical conditions and measures to control dispersion from source towards the worker

Engineering controls, e.g. exhaust ventilation, general ventilation; specify effectiveness of measure

- Local exhaust ventilation systems (generic LEV(84%)); for dryers, higher efficiencies are required (95-99%)
- Cyclones/baghouse filters/ demisters (for minimizing air emissions): efficiency: 70-90% (cyclones), 50-80% (dust filters), 85-95% (baghouse filters, scrubbers)
- Process enclosure, especially in potentially dusty units
- Dust control: dust and Zn/Pb in dust/aerosols needs to be measured in the workplace air (static or individual) according to national regulations.
- Special care for the general establishment and maintenance of a clean working environment by e.g.:
 - Cleaning of process equipment and workshop
 - Storage of calcines in dedicated silos

Organisational measures to prevent /limit releases, dispersion and exposure

Specific organisational measures or measures needed to support the functioning of particular technical measures (e.g. training and supervision).

• In general, an integrated management system is implemented on the workplace e.g.

nyrstar

Annex – page 5 Publication Date: 2014-04-14 Date of Revision: 2017-10-24

ISO 9000, ISO ICS13100 series, or alike, and, when applicable, by being IPPC-compliant

Such management system should include general industrial practice like e.g.:

- On The substance/ UVCB is rigorously contained by technical means during the whole lifecycle including manufacture, purification, cleaning/maintenance of equipment, sampling, analysis, loading and unloading of equipment or vessels, waste disposal or purification and storage
- Procedural and control technologies shall be used that minimise emission and any resulting exposure
- Only properly trained and authorised personnel handles the substance
- For cleaning/maintenance, special procedures such as system purging and washing before opening devices
- Procedures, control technologies for accidents and waste
- Substance-handling procedures well documented and strictly supervised
- Additionally, in case of need, personal protection measures (see below) are recommended

Conditions and measures related to personal protection, hygiene and health evaluation

Personal protection, e.g. wearing of gloves, face protection, full body dermal protection, goggles, respirator; specify effectiveness of measure; specify the suitable material for the PPE (where relevant) and advise how long the protective equipment can be used before replacement (if relevant)

Wearing of gloves and protective clothing is compulsory (efficiency >=90%).

With normal handling, no respiratory personal protection (breathing apparatus) is necessary. If risk for exceedance of OEL/DNEL, use e.g.:

- -dust filter-half mask P1 (efficiency 75%)
- -dust filter-half mask P2 (efficiency 90%)
- -dust filter-half mask P3 (efficiency 95%)
- -dust filter-full mask P1 (efficiency 75%)
- -dust filter-full mask P2 (efficiency 90 %)
- -dust filter-full mask P3 (efficiency 97.5%)

Eyes: safety glasses are recommended

Exposure assessment

A. Workers

nÿrstar

Annex - page 6

Publication Date: 2014-04-14 Date of Revision: 2017-10-24

The intermediate "Pb-leach residue", is produced in the "leaching/purification" section of the zinc production plant. This process step involves essentially wet processes. Recent monitored data have been reported for Zn, Cd, Pb, As, and other metals in workplace air (table below). All data provided in table below are measured for given individual workers at the same workplace area ("leaching/purification") at different times. For each individual, the specific value of the measurement and the geomean value of the different measurements are reported. For the assessment, the full range of the observed individual geomean values is compared with the DNEL.

Technical specifications of the monitoring:

All measurements were performed by personal sampler (unless indicated otherwise), during the period 2012-2013.

Samples 1-7: (personal)

-sampling device: Gilair 5

-filter type: Millipore 0.8µm cassette type 'cyclone', all inhalable fraction

-method of analysis: internal lab, ISO 9901 certified, ICPMS

-error before and after measurement: <5%

Samples 8-9: static sampling

-sampling device: Staplex high volume sampler

-filter type: TFA#41, HVS casette (inhalable fraction)

-method of analysis: internal lab, ISO 9901 certified, ICPMS

-error before and after measurement: <5%

For the human health assessment of the intermediate, the metals contained in table below are considered relevant. See also table 2.

Results are given in table below.

Table 2. Geomean of monitored metal concentrations in workplace air (μg/m3) at the leaching/purification section of the zinc plant. Personal samplers, geomean results given by individual worker. The original data are available from IZA.

Metal in workplace air (µg/m3)	Number of samples (year)	Arsenic	Cadmium	Lead	Nickel	Zinc	Copper
Leaching 1	2		1.3	29.9		36.8

^{*}considering a factor inhalable-respirable of 2.5

Discussion

In this assessment, the focus is put on the possible local inhalatory effects of the metals that are considered most critical in a workplace situation, also in a context of combined exposure. The monitoring data demonstrate that the different metals contained in the intermediate do not result in risk for local inhalatory effects. Risk ratios for local inhalation effect are <<1, due to the risk management measures applied and the wet nature of the processes involved.

So it can be concluded from this quantitative assessment that no inhalation risk is predicted when the risk management measures as indicated in the exposure scenario are applied.

nyrstar

Annex – page 8

Publication Date: 2014-04-14 Date of Revision: 2017-10-24

Dermal contact with substances at the workplace is linked to workplace air levels (contact through deposition from air, and contact with contaminated surfaces). Direct contact (through e.g. immersion) is not relevant.

There are no direct data on dermal exposure. For the metals Pb, Cd and As, dermal exposure is integrated in the biomonitoring for these substances that is routinely performed at the plants. More importantly, it is noted that workplace concentrations of As and Cd are very low, as follows from table above. For the metal present in more significant levels, i.e. Pb, it is known that Pb is most easily taken up by inhalation or ingestion, and that dermal uptake is negligible in terms of systemic uptake, as compared to the other routes of exposure. So, according to the qualitative assessment, considering the elements above in combination with the very low exposure levels in the workplace air, no risks are predicted for dermal effects, neither. It is emphasised that workers constantly wear protective clothing, including special gloves.

In addition to the data mentioned in table above, occasional measurements demonstrate that workplace levels of Cr, Cu, Sb, Al and Mn were also very low (at or close to detection level).

B. Environment

The zinc plant has a closed water circuit, with no emissions to the surface waters. So no risk is predicted for the aquatic freshwater surface waters and sediments.

The leaching/purification section of the plant, where the intermediate is formed, involves essentially wet processes. The emissions to air from this section are considered insignificant.

The endpoints STP, and marine waters/sediments are not relevant for the plant of this assessment (no emissions to STP and not located on coastal area, respectively).

nÿrstar

Annex – page 9 Publication Date: 2014-04-14 Date of Revision: 2017-10-24

1.2 Exposure scenario 2: storage and handling of the intermediate

Full title: Industrial storage and handling in bulk of the Intermediate Leach.residue, zinc ore, Pb containing (293-314-4), from Zinc-metallurgical leaching and gas-cleaning steps.

Table 4. Exposure scenario 2 for the intermediate "leach residue, zinc ore, Pb containing".

Exposure Scenario Format (1) addressing uses carried out by workers

Title of exposure scenario Leach residue, zinc ore, Pb containing 2: Industrial storage and handling in bulk of the Intermediate "Leach.residue, zinc ore, Pb containing" (293-314-4), from Zinc-metallurgical leaching and gascleaning steps

List of all use descriptors related to the life cycle stage and all the uses under it; include market sector (by PC), if relevant;

SU: 9, 14

PROC: 8a, 8b, 9

PC: "Technical function: intermediate (precursor)"

AC: not applicable

ERC: 6a

Further explanations (if needed)

The intermediate "Leach residue, zinc ore, Pb containing" is in most cases transported, handled and stored in bulk volume. This scenario describes the possible exposure and risk management of bulk storage and handling.

Exposure Scenario

1.2.1 Contributing scenario (1) controlling environmental exposure for Industrial storage and handling in bulk of the Intermediate Leach.residue, zinc ore, Pb containing (293-314-4), from Zinc-metallurgical leaching and gascleaning steps

Further specification:

- After press-filtering to reduce volume, transfer of the Pb-rich Intermediate occurs in big-bags or containers or covered bulk load trucks, according to applicable regulation
- Unloading of trucks/train wagons in the storage area
- Further storage inside in covered "loges" (after press-filtering to reduce moisture to 16-40% - Occasionally, the filter cake may be treated in a rotary dryer)
- Loading of trucks or train wagons or cargo-ships or transfer in big-bags and containers
- Maintenance activities take place

Product characteristics

Product related conditions:

The Leach residue, zinc ore, Pb containing is a wet filter cake with an average Lead-content

nÿrstar

Annex – page 10

Publication Date: 2014-04-14 Date of Revision: 2017-10-24

of 8-70% w/w and a moisture content of 16-27%

Amounts used

Daily and annual amount per site:

maximum 400000 T/y

Frequency and duration of use

Continuous production, intermittent storage and handling of large volumes

Environment factors not influenced by risk management

Flow rate of receiving surface water:

Default is used unless specified otherwise

Other given operational conditions affecting environmental exposure

Other given operational conditions: e.g. technology or process techniques determining the initial release of substance from process (via air and waste water); dry or water based processes; conditions related to temperature and pressure; indoor or outdoor use of products; work in confined area or open air;

- All processes are performed in a dedicated area.
- Bulk intermediate is unloaded from the truck/ship and stored indoors in large
 hangars on concrete floor. The bulk material is stored in dedicated warehouse. Each
 product is stored in a separate pile. If appropriate, water sprinklers may be used for
 keeping the moisture content at required level, or as an option to minimize dust
 formation. The stockpile is handled by bulldozer.
- The material is reloaded in ship by large crane (volume 4m³).
- All waters on the quay are guided to the sewage system by the slightly inclined slope of the quay. The quay is cleaned regularly.
- All water residues (from precipitation, cleaning, sprinkling,...) are collected and treated in an on-site water purification system involving flocculation and filtration (and possibly other systems). After treatment, the water is discharged into the local surface water (dock).

Technical conditions and measures at process level (source) to prevent release

Process design aiming to prevent releases and hence exposure to the environment; this includes in particular conditions ensuring rigorous containment; performance of the containment to be specified (e.g. by quantification of a release factor in section 9.x.2 of the CSR);

Ships are docked as close as possible to the dock edge to optimize operations.

Technical onsite conditions and measures to reduce or limit discharges, air emissions and

nyrstar

Annex – page 11 Publication Date: 2014-04-14 Date of Revision: 2017-10-24

releases to soil

Technical measures, e.g. on-site waste water and waste treatment techniques, scrubbers, filters and other technical measures aiming at reducing releases to air, sewage system, surface water or soil; this includes strictly controlled conditions (procedural and control technology) to minimise emissions; specify effectiveness of measures; specify the size of industrial sewage treatment plant (m3/d), degradation effectiveness and sludge treatment (if applicable);

- On-site water treatment
- Prevention of leakage of waters into the dock waters by slight inclination of quay surface to collection points
- Indoor areas are ventilated by natural air flow. Outdoor handling of materials may result in local dust formation. Dust deposited in work area is collected by cleaning machines and transported to the cleaning water system.

Organizational measures to prevent/limit release from site

Specific organisational measures or measures needed to support the functioning of particular technical measures. Those measures need to be reported in particular for demonstrating strictly controlled conditions.

• In general, emissions are controlled and prevented by implementing an integrated management system e.g. ISO 9000 or alike, and, when applicable, by being IPPC-compliant (cf. NFM-BREF).

Such management system, aiming at ensuring controlled conditions, should include general industrial practice like e.g.:

- The substance/ UVCB is rigorously contained by technical means during the whole lifecycle including manufacture, purification, cleaning/maintenance of equipment, sampling, analysis, loading and unloading of equipment or vessels, waste disposal or purification and storage
- Procedural and control technologies shall be used that minimize emission and any resulting exposure
- Only properly trained and authorized personnel handle the substance
- For cleaning/maintenance, special procedures such as system purging and washing before opening devices
- Procedures, control technologies for accidents and waste
- Substance-handling procedures well documented and strictly supervised
- Treatment and monitoring of releases to outside air, and exhaust gas streams

nyrstar

Publication Date: 2014-04-14 Date of Revision: 2017-10-24

Annex – page 12

(process & hygiene) is possible, according to national regulation.

• SEVESO compliance, if applicable

Conditions and measures related to municipal sewage treatment plant

Size of municipal sewage system/treatment plant (m3/d); specify degradation effectiveness; sludge treatment technique (disposal or recovery); measures to limit air emissions from sewage treatment (if applicable); please note: the default size of the municipal STP (2000 m3/d) will be rarely changeable for downstream uses.

In cases where applicable: default size, unless specified otherwise.

Conditions and measures related to external treatment of waste for disposal

Fraction of used amount transferred to external waste treatment for disposal; type of suitable treatment for waste generated by work-ers uses, e.g. hazardous waste incineration, chemical-physical treatment for emulsions, chemical oxidation of aqueous waste; specify effectiveness of treatment;

• If any, all hazardous wastes are treated by certified contractors according to EU and national legislation.

Conditions and measures related to external recovery of waste

Fraction of used amount transferred to external waste treatment for recovery: specify type of suitable recovery operations for waste generated by workers uses, e.g. re-distillation of solvents, refinery process for lubricant waste, recovery of slags, heat recovery out-side waste incinerators; specify effectiveness of measure;

- All captured residues formed during the activities are recovered and either recycled in the system or handled further according the waste legislation.
- Users of Zn/Pb and Zn/Pb-compounds, have to favour the recycling channels of the end-of-life products
- Users of Zn/Pb and Zn/Pb-compounds have to minimize Zn/Pb-containing waste, promote recycling routes and, for the remaining, dispose the waste streams according the Waste regulation.

1.2.2 Contributing scenario (2) controlling worker exposure for Industrial storage and handling in bulk of the Intermediate Leach.residue, zinc ore, Pb containing (293-314-4), from Zinc-metallurgical leaching and gas cleaning steps

Name of contributing scenario 2:

nyrstar

Annex – page 13 Publication Date: 2014-04-14 Date of Revision: 2017-10-24

The intermediate "Leach residue, zinc ore, Pb containing" is in most cases transported, handled and stored in bulk volume. This scenario describes the storage and handling in bulk steps.

Further specification

Worker exposure during handling and storage of this bulk material highly depends on the nature of the work: outdoor or indoor, enclosed (e.g. in a closed cabin with positive air pressure and/or filtering or personal respiratory protection equipment), duration and frequency of the exposure,... etc. In defined exposure situations, personal respiratory protection equipment is used. Given the wide variability of these determining factors, the exposures will be assessed for each function specifically.

Product characteristic

Product related conditions, e.g. the concentration of the substance in a mixture, the physical state of that mixture (solid, liquid; if solid: level of dustiness), package design affecting exposure)

- The substance/ UVCB is a wet filter cake, with moisture content of 16-40 %
- With occasional (handling, sampling, cleaning, maintenance) and potentially direct exposure for workers
- The average Zinc content lies between 20-55% W/W, and Lead content between 8-70%
- Copper compounds (up to 10% w/w Pb) and Cadmium compounds (up to 10% w/w Cd) are possibly present

Amounts used

Amounts used at a workplace (per task or per shift); note: sometimes this information is not needed for assessment of worker's expo-sure

Maximum 1200 T/day

Frequency and duration of use/exposure

Duration per task/activity (e.g. hours per shift) and frequency (e.g. single events or repeated) of exposure

As indicated

Human factors not influenced by risk management

Particular conditions of use, e.g. body parts potentially exposed as a result of the nature of the activity

Publication Date: 2014-04-14 Date of Revision: 2017-10-24

protection is applied.

Other given operational conditions affecting workers exposure

Other given operational conditions: e.g. technology or process techniques determining the initial release of substance from process into workers environment; room volume, whether the work is carried out outdoors/indoors, process conditions related to temperature and pressure.

• All processes are carried out in dedicated areas with a minimum of operators

Technical conditions and measures at process level (source) to prevent release

Process design aiming to prevent releases and hence exposure of workers; this in particular includes conditions ensuring rigorous containment; performance of containment to be specified (e.g. by quantification of residual losses or exposure)

- Several activities are carried out outdoors.
- Bulk materials are stored indoor in separate open boxes/silos/piles.
- Materials with high dustiness may be humidified by sprinkling
- All waters (cleaning, precipitation) are collected and treated in on site purification system.

Technical conditions and measures to control dispersion from source towards the worker

Engineering controls, e.g. exhaust ventilation, general ventilation; specify effectiveness of measure

- Special care for the general establishment and maintenance of a clean working environment by e.g.:
 - Cleaning of process equipment and workshop
 - Storage of materials in dedicated storage location

Organisational measures to prevent /limit releases, dispersion and exposure

Specific organisational measures or measures needed to support the functioning of particular technical measures (e.g. training and supervision). Those measures need to be reported in particular for demonstrating strictly controlled conditions (to justify exposure based waiving).

 In general, an integrated management system is implemented on the workplace e.g. ISO 9000, ISO ICS13100 series, or alike, and, when applicable, by being IPPC-compliant

Such management system, aiming at ensuring controlled conditions, should include general industrial practice like e.g.:

nyrstar

Annex – page 15 Publication Date: 2014-04-14 Date of Revision: 2017-10-24

- The substance/ UVCB is rigorously contained by technical means during the whole lifecycle including manufacture, purification, cleaning/maintenance of equipment, sampling, analysis, loading and unloading of equipment or vessels, waste disposal or purification and storage
- Procedural and control technologies shall be used that minimize emission and any resulting exposure
- Only properly trained and authorized personnel handle the substance
- For cleaning/maintenance, special procedures such as system purging and washing before opening devices
- Procedures, control technologies for accidents and waste
- Substance-handling procedures well documented and strictly supervised,
 e.g.:
 - Workers take into account wind direction when being near material,
 e.g. sampler will sample at the above-wind side of material.
 - Truck drivers will stay in cabin while loading/unloading, with ventilation turned off
- Additionally, in case of need, personal protection measures are recommended (see below)

Conditions and measures related to personal protection, hygiene and health evaluation

Personal protection, e.g. wearing of gloves, face protection, full body dermal protection, goggles, respirator; specify effectiveness of measure; specify the suitable material for the PPE (where relevant) and advise how long the protective equipment can be used before replacement (if relevant)

Wearing of gloves and protective clothing is compulsory (efficiency >=90%).

With normal handling, no respiratory personal protection (breathing apparatus) is necessary. If risk for exceedance of OEL/DNEL, use e.g.:

- -dust filter-half mask P1 (Assigned Protection Factor (APF) 4)
- -dust filter-half mask P2 (APF 10)
- -dust filter-half mask P3 (APF 20)
- -dust filter-full mask P1 (APF 4)
- -dust filter-full mask P2 (APF 10)
- -dust filter-full mask P3 (APF 40)

Eyes: safety goggles (e.g. EN 166) are recommended

Annex – page 16 Publication Date: 2014-04-14

Exposure assessment

1. Environment

The bulk materials are treated in isolated volumes on concrete surface during the whole process of unloading, storage and reloading. Spreading by wind is prevented by storage indoors and possible spraying. Emissions to local water (dock) are prevented by collecting all waters (precipitation, cleaning, ..) in a water treatment system.

Surface waters

The exposure is assessed based on monitored data in the dock (table 5)

Table 5: Monitored metal concentrations (dissolved fraction) and water parameters in the dock at the site. Since long-term effects are considered, mean values are used.

metal	Zn	Pb	Cd							
Concentration in dock water (µg/I)	21	1.3	0.15							
PNEC bioavailable*	47 (bioavailability 23%)	6.5 (bioavailability calculated with DOC correction only)	0.25 (EQS for high hardness: > 250mg CaCO3)							
PEC/PNEC	0.45	0.2	0.6							

^{*}Bioavailability parameters: pH 7.0, TOC: 5.4mg/l; hardness "very high" (113°F)

Discussion:

The PEC/PNEC values for surface water of the dock indicate no risks for the main metals involved. In terms of combining the exposures, it is emphasised that the combined effect of these metals is antagonistic and that summation would result in an overestimation of the risk; e.g. it is well documented that presence of zinc protects against the uptake of Cd by organisms. Taking also into account that in these calculations background exposure has been included (background should be subtracted to calculate local added risk), it is concluded that there are no risks predicted for the surface water if the risk management measures as described in the scenario, are applied.

Regarding the combined risk of metals for the aquatic environment, combined toxicity effects are not clear at present, and simple summation of the risk ratios based on measured concentrations is not scientifically justified (see section 10, under "current thinking – environment") for discussion.

Man via the environment

nÿrstar

Annex – page 17

Publication Date: 2014-04-14 Date of Revision: 2017-10-24

During unloading and reloading of the materials dust may be formed that may be blown to immediate surroundings of the site. The "Man via environment" scenario analyses the potential exposure of populations living in the surroundings of the site through inhalation of ambient air, dietary consumption of locally grown food, consumption of local groundwater for drinking water. Given the localisation of the site in an exclusively industrial environment, the absence of habitation in the surroundings of the site, the absence of agricultural activity and drinking water abstraction, this scenario is considered not relevant.

The Flemish Environment Agency (VMM) monitors metals in suspended air on a few measuring points in Flanders, e.g. in urban Antwerp, but not in Antwerp harbor. Measurements in "urban" Antwerp air for e.g. Cd are similar to background": <1 ng Cd/m3 (https://www.vmm.be/data/zware-metalen/zware-metalen#section-2).

The endpoints STP, and marine waters/sediments are not relevant for this local scenario (no emissions to STP and not located or emitting on coastal area, respectively).

2. Workers

The intermediate "Pb-leach residue", is produced in the "leaching/purification" section of the zinc production plant. This process step involves essentially wet processes. After drying, during which the moisture content is brought to 16-40 %, the resulting Pb leach residue is transported and stored as a humid (moist) material.

In the current assessment of occupational exposure of workers involved in the handling of the intermediate during loading/unloading/storage, individual monitoring data are used by preference (table 6). Given the composition of the substance, exposures to zinc, lead and cadmium are considered relevant.

Monitored data on workers

In table 6a, individual monitored exposure data are given for job descriptions at the storage and handling site. Workers are monitored individually by personal samplers. The workplace air is monitored; in case the air levels exceed or are close to the occupational standards, the worker uses personal respiratory protection devices as indicated. This way of working is generally applied in practice.

Table 6a: individual monitoring data* (inhalable fraction, μ g/m3) and resulting exposure taking into account personal respiratory protection, of workers handling Pb-leach residue in bulk at handling and storage site of Pb-leach residue.

^{*}this job description is similar to the sampling job at the storage/handling site.

In the handling and storage, a specific task can be performed which is related to the filling of (usually big) bags. In this specific activity, which is performed in bagging campaigns at an irregular frequency, exposure can be higher due to formation of local dust in the direct surroundings of the workers. The exposure situation under such conditions was specifically monitored and the data are presented in table 6c.

While at the level of the respirable fraction, the concentrations are below the DNELs (e.g. Cd), a number of DNELs expressed as inhalable fraction are exceeded for a number of metals (As, Cu, Pb). These figures reflect general workplace conditions; it is thus in the first place necessary to apply additional risk management measures at the general workplace level. As a main measure, it is proposed to apply local exhaust ventilation at the operation. This is expected to already improve the exposure significantly. Additional specific measures should be considered, e.g. specific information of workers, use of wet cleaning practices, if possible with water mist conditions, and others. In general, it is also recommended to enclose the work post where bagging occurs. Occasional spills at the bagging installation should always be cleaned up immediately to avoid further contamination of the area.

In addition, the use of personal protective equipment is considered necessary (proper respiratory protection devices, see contributing scenario 9.1.1.2.), as long as further measurements have not demonstrated that the workplace air exposure is compliant with the DNELs.

Mn	na	44		200	0.13
Pb	na	2802		150	7.9

Discussion

As indicated, monitored data are used by preference for assessing worker exposure, since they reflect reality. For this scenario, relevant monitoring data are available for the typical jobs/tasks that are performed by the workers. In this assessment, the focus is put on the potential local inhalation effects of the metals contained in the substance that are considered most critical in a workplace situation. The observed monitored exposure levels of the workers for the different job descriptions are well below DNELs or occupational exposure limit values for the metals in tables 6a and 6b (Zn: 2000 μ g/m3, Pb: 50 μ g/m3, and Cd: 10 μ g/m3 and 4 μ g/m3 for inhalable and respirable, respectively). Also, when considering combined exposure from the different metals present by summing up risk ratios, no risk is predicted.

Special attention should be paid to "bagging" operations where potential for exposure is higher and where additional risk management measures should be installed to bring the exposure down to acceptable levels.

Given that the availability of good quality, recent monitoring data available for the different job descriptions of this scenario, exposure modelling is not performed.

Conclusion

Based on the monitoring data relevant for the different jobs/tasks of this scenario, it can be concluded that no risk is predicted for the workers active in this scenario, when the risk management measures as described in this scenario are applied.

nvrstar

Annex – page 21 Publication Date: 2014-04-14 Date of Revision: 2017-10-24

The exposure assessment above focuses on inhalation exposure. Dermal contact with substances at the workplace is linked to workplace air levels (contact through deposition from air, and contact with contaminated surfaces). Direct contact (through e.g. immersion) is not relevant.

Dermal exposures to the metals involved, as estimated with the MEASE model (use of properly designed gloves assumed), are all very low, i.e. \leq 0.0005 mg/d (= MEASE-estimation of <0.24 mg/d, considering dermal absorption of 0.2% for dust). Based on these estimations, no risks are predicted for dermal effects, neither. It is emphasised that workers constantly wear protective clothing, including special gloves.

The proposed risk reduction measures will also reduce the possible exposure to other metals e.g. Cr, Cu, Sb, Al and Mn.

1.3. Exposure scenario 3: Use of the intermediate

Full title: Industrial use of the isolated Intermediate Leach Pb residue (293-314-4), in the ultimate manufacturing of Lead or Lead compounds by pyro-metallurgical processes

Table 3. Exposure scenario 3 for the intermediate Pb-leach residue

Exposure Scenario Format (1) addressing uses carried out by workers

Title of Exposure Scenario <u>Leach Pb residue - 3</u>: Industrial use of the isolated Intermediate Leach Pb residue (<u>293-314-4</u>), in the ultimate manufacturing of Lead or Lead compounds by pyro-metallurgical processes.

List of all use descriptors related to the life cycle stage and all the uses under it; include market sector (by PC), if relevant;

SU: 8, 14

PROC: 2, 3, 8b, 9, 13, 22, 26

PC: 19

AC: not applicable

ERC: 6a

Further explanations (if needed)

The 'Leach Pb residue' (293-314-4) is unloaded, blended with other, primary and/or secondary materials, and loaded in Smelting Furnaces (ISA, Blast, ...) or similar for further smelting and extraction of Lead metal or Lead compounds.

Exposure Scenario

1.3.1 Contributing scenario (1) controlling environmental exposure for the Industrial use of the isolated Intermediate Leach Pb residue (293-314-4), in the ultimate manufacturing of Lead or Lead compounds by pyro-metallurgical processes.

 $Further\ specification:$

- The 'Leach Pb residue' is unloaded from transport trucks, ADR-big-bags or containers, ...and transferred to storage silo's through especially designed transfer units,
- The 'Leach Pb residue' is optionally blended with other Lead-containing primary or secondary materials
- The mixture is continuously fed to smelting furnaces (i.e. ISA, Blast, ...)
- The 'Leach Pb residue' is typically used in the production of Lead metal (EC 231-100-4) and recovery of precious metals.

Maintenance activities

Product characteristics

Product related conditions:

The 'Leach Pb residue' is a lumpy wet filtercake with an average Lead-content of 20-70% w/w

The Lead melt produced contains up to >90%w/w Lead

Amounts used

Daily and annual amount per site:

nÿrstar

Annex – page 23 Publication Date: 2014-04-14 Date of Revision: 2017-10-24

maximum 50000 T/y of Lead contained

Frequency and duration of use

Continuous production

Environment factors not influenced by risk management

Flow rate of receiving surface water:

Default is used unless specified otherwise

Other given operational conditions affecting environmental exposure

Other given operational conditions: e.g. technology or process techniques determining the initial release of substance from process (via air and waste water); dry or water based processes; conditions related to temperature and pressure; indoor or outdoor use of products; work in confined area or open air;

Blending, and optionally pelletizing, and furnaces are operated under strong aspiration (negative pressure towards atmospheric pressure)

An appropriate (process) gascleaning system is applied

- Besides process waters, some non-process waters can be generated containing zinc (e.g. from cleaning)
- All processes are performed in a confined area. All residues containing zinc are recycled.

Technical conditions and measures at process level (source) to prevent release

Process design aiming to prevent releases and hence exposure to the environment; this includes in particular conditions ensuring rigorous containment; performance of the containment to be specified (e.g. by quantification of a release factor in section 9.x.2 of the CSR);

- Process enclosures and closed circuits where relevant and possible.
- Containment of liquid volumes in sumps to collect/prevent accidental spillage, acid solutions are treated appropriately.

Technical onsite conditions and measures to reduce or limit discharges, air emissions and releases to soil

Technical measures, e.g. on-site waste water and waste treatment techniques, scrubbers, filters and other technical measures aiming at reducing releases to air, sewage system, surface water or soil; specify effectiveness of measures; specify the size of industrial sewage treatment plant (m3/d), degradation effectiveness and sludge treatment (if applicable);

- On-site waste water treatment techniques can be applied to prevent releases to water (if applicable) e.g.: chemical precipitation, sedimentation and filtration (efficiency 90-99.98%).
- Containment of liquid volumes in sumps to collect/prevent accidental spillage
- Air emissions are controlled by use of cyclones, scrubbers, filters, demisters and/or other air emission abatement devices e.g. filters (up to 95% efficiency), wet scrubbers (50-95% efficiency). This may create a general negative pressure at the system openings (loading, sampling, production exit).

Organizational measures to prevent/limit release from site

Specific organisational measures or measures needed to support the functioning of particular technical measures.

In general, emissions are controlled and prevented by implementing an integrated

nÿrstar

Annex – page 24 Publication Date: 2014-04-14 Date of Revision: 2017-10-24

management system e.g. ISO 9000, ISO 14000 series, or alike, and, when applicable, by being IPPC-compliant (cf. NFM-BREF).

Such management system, should include general industrial practice like e.g.:

- On The substance/ UVCB is rigorously contained by technical means during the whole lifecycle including manufacture, purification, cleaning/maintenance of equipment, sampling, analysis, loading and unloading of equipment or vessels, waste disposal or purification and storage
- Procedural and control technologies shall be used that minimise emission and any resulting exposure
- Only properly trained and authorised personnel handles the substance
- For cleaning/maintenance, special procedures such as system purging and washing before opening devices
- Procedures, control technologies for accidents and waste
- Substance-handling procedures well documented and strictly supervised
- Treatment and monitoring of releases to outside air, and exhaust gas streams (process & hygiene), according to national regulation.
- SEVESO 2 compliance, if applicable

Conditions and measures related to municipal sewage treatment plant

Size of municipal sewage system/treatment plant (m3/d); specify degradation effectiveness; sludge treatment technique (disposal or recovery); measures to limit air emissions from sewage treatment (if applicable); please note: the default size of the municipal STP (2000 m_3/d) will be rarely changeable for downstream uses.

In cases where applicable: default size, unless specified otherwise.

Conditions and measures related to external treatment of waste for disposal

Fraction of used amount transferred to external waste treatment for disposal; type of suitable treatment for waste generated by workers uses, e.g. hazardous waste incineration, chemical-physical treatment for emulsions, chemical oxidation of aqueous waste; specify effectiveness of treatment;

• If any, all hazardous wastes are treated by certified contractors according to EU and national legislation.

Conditions and measures related to external recovery of waste

Fraction of used amount transferred to external waste treatment for recovery: specify type of suitable recovery operations for waste generated by workers uses, e.g. re-distillation of solvents, refinery process for lubricant waste, recovery of slags, heat recovery out-side waste incinerators; specify effectiveness of measure;

 All residues formed during the smelting process, are recovered and either further treated in the system or handled according the waste legislation.

nyrstar

Annex – page 25 Publication Date: 2014-04-14 Date of Revision: 2017-10-24

- Users of Zn/Pb and Zn/Pb-compounds have to favour the recycling channels of the end-of-life products
- Users of Zn/Pb and Zn/Pb-compounds have to minimize Zn/Pb-containing waste, promote recycling routes and, for the remaining, dispose the waste streams according the Waste regulation.

1.3.2 Contributing scenario (3) controlling worker exposure for the Industrial use of the isolated Intermediate Leach.Pb.residue (293-314-4), in the ultimate manufacturing of Lead or Lead compounds by pyro-metallurgical processes.

Name of contributing scenario 3:

The 'Leach Pb residue' (293-314-4) is unloaded, blended with other, primary and/or secondary materials, and loaded in Smelting Furnaces (ISA, Blast, ...) or similar for further smelting and extraction of Lead metal or Lead compounds.

Further specification

Product characteristic

Product related conditions, e.g. the concentration of the substance in a mixture, the physical state of that mixture (solid, liquid; if solid: level of dustiness), package design affecting exposure)

- The treated substance/ UVCB is lumpy wet cake,
- Besides the metal phase produced (rough Pb metal), slag is also cast and further processed
- With occasional (sampling, cleaning, maintenance) and potentially direct exposure for workers
- The average Pb content of the melt lies above 90% w/w and needs further refining steps (distillation columns)
- Cadmium compounds (up to 1% w/w Cd) and other NF-Metals are potentially present

Amounts used

Amounts used at a workplace (per task or per shift); note: sometimes this information is not needed for assessment of worker's expo-sure

Maximum 300 T/day, 100T/shift of Lead contained

Frequency and duration of use/exposure

Duration per task/activity (e.g. hours per shift) and frequency (e.g. single events or repeated) of exposure

8hrs shift

Human factors not influenced by risk management

Particular conditions of use, e.g. body parts potentially exposed as a result of the nature of the activity

Uncovered body parts: (potentially) face

nyrstar

Annex – page 26 Publication Date: 2014-04-14 Date of Revision: 2017-10-24

Other given operational conditions affecting workers exposure

Other given operational conditions: e.g. technology or process techniques determining the initial release of substance from process into workers environment; room volume, whether the work is carried out outdoors/indoors, process conditions related to temperature and pressure.

- All processes are carried out in confined areas with a minimum of operators
- The process is managed and controlled from a separate control-room.

Technical conditions and measures at process level (source) to prevent release

Process design aiming to prevent releases and hence exposure of workers; this in particular includes conditions ensuring rigorous containment; performance of containment to be specified (e.g. by quantification of residual losses or exposure)

- Local exhaust ventilation on work areas with potential dust generation, dust capturing and removal techniques
- Process enclosures closed circuits or semi-enclosures where appropriate.
- Containment of liquid volumes in sumps to collect/prevent accidental spillage

Technical conditions and measures to control dispersion from source towards the worker

Engineering controls, e.g. exhaust ventilation, general ventilation; specify effectiveness of measure

- Local exhaust ventilation systems (generic LEV (84%)),
- Cyclones/scrubbers/ demisters (for minimizing air emissions): efficiency: 70-90% (cyclones), 50-80% (dust filters), 85-95% (Scrubbers, Absorbers...)
- Dust control: dust and Zn in dust needs to be measured in the workplace air (static or individual) according to national regulations.
- Special care for the general establishment and maintenance of a clean working environment by e.g.:
 - Cleaning of process equipment and workshop
 - Storage of calcine/sinter in dedicated silos and solutions in covered vessels and thickeners

Organisational measures to prevent /limit releases, dispersion and exposure

Specific organisational measures or measures needed to support the functioning of particular technical measures (e.g. training and supervision).

 In general, an integrated management system is implemented on the workplace e.g. ISO 9000, ISO ICS-13100 series, or alike, and, when applicable, by being IPPC-compliant

Such management system, should include general industrial practice like e.g.:

- The substance/ UVCB is rigorously contained by technical means during the whole lifecycle including manufacture, purification, cleaning/maintenance of equipment, sampling, analysis, loading and unloading of equipment or vessels, waste disposal or purification and storage
- Procedural and control technologies shall be used that minimise emission and

nyrstar

Publication Date: 2014-04-14 Date of Revision: 2017-10-24

Annex – page 27

any resulting exposure

- Only properly trained and authorised personnel handles the substance
- For cleaning/maintenance, special procedures such as system purging and washing before opening devices
- Procedures, control technologies for accidents and waste
- Substance-handling procedures well documented and strictly supervised
- Additionally, in case of need, personal protection measures (see below)

Conditions and measures related to personal protection, hygiene and health evaluation

Personal protection, e.g. wearing of gloves, face protection, full body dermal protection, goggles, respirator; specify effectiveness of measure; specify the suitable material for the PPE (where relevant) and advise how long the protective equipment can be used before replacement (if relevant)

Wearing of gloves and protective clothing is compulsory (efficiency >=90%).

With normal handling, no respiratory personal protection (breathing apparatus) is necessary. If risk for exceedance of OEL/DNEL, use e.g.:

- -dust filter-half mask P1 (efficiency 75%)
- -dust filter-half mask P2 (efficiency 90%)
- -dust filter-half mask P3 (efficiency 95%)
- -dust filter-full mask P1 (efficiency 75%)
- -dust filter-full mask P2 (efficiency 90 %)
- -dust filter-full mask P3 (efficiency 97.5%)

Eyes: safety glasses are recommended

Exposure assessment

A. Workers

At the receiver's end (user of the intermediate-exposure scenario 2), the extensive available individual monitoring data are grouped together in two "intermediate workplace" situations: "materials handling process" (54 workers in total) and "smelter process" (51 workers in total). For these 2 workplace situations, an assessment is done for given work situations as specified in the table below. For each of these situations, more than 6 measurements are available.

Technical specifications of the monitoring:

All measurements were performed by personal sampler (unless indicated otherwise), during the period 2010-2013.

-sampling device: Buck VSS-5 Validated System,

nvrstar

Annex – page 28

Publication Date: 2014-04-14 Date of Revision: 2017-10-24

Product number: 32407

Revision number: 0300

- -flow rate : 2000cc/min (Volume aspired ranged between 650 I and 860 I; duration of sampling was ~=360 minutes (range: 325-430);
- -filter type: IOM sampler equipped with a PVC cassette (all inhalable fraction)
- -method of analysis: Microgolf dissolution in HCl/HNO3/HF + ICP-OES analysis

For the human health assessment of the intermediate, the metals contained in table below are considered relevant. See also table 2.

Results are given in table below.

Table 4. Monitored metal concentrations in workplace air (50P/90P inhalable fraction in μ g/m3; values indicated as "<x" were taken as "x") at the user plant. The original data are available from IZA.

Discussion

The monitoring data demonstrate that the different metals contained in the intermediate are not the cause of risk for local inhalatory effects, which is considered to be the most sensitive endpoint in the workers situation. Risk ratios for local inhalation effect are <1, due to risk management measures applied and the wet nature of the processes involved. The one exemption to this general picture is Pb where for some activities the combination of the 90P worst case exposure with the lowest OEL gives a risk ratio between 1 and 1.4. In this respect it is emphasised that a) Pb exposure is bio-monitored continuously by measuring Pb in blood, and b) personal respiratory protection is always mandatory in exceptional cases where there is possibility for increased exposure. The protective effect of such personal protection measures is not taken into account in the workplace air monitoring.

Moreover, according to ECHA guidance R14, 90P values are used for the assessment above. The same guidance allows to use the P75 if the exposure data set is well defined, of high quality, referring to homogenous exposure conditions (which is the case for company specific assessments), and results in a risk ratio clearly below 1 and being fully representative for the operational conditions and risk management measures described in the exposure

^{**} considering a factor inhalable-respirable of 2.5

scenario. These criteria are all fulfilled in the present case; based on the 75P, a risk ratio<1 can thus also be considered for the 2 activities resulting in a higher P90 for Pb.

The metal concentrations in this workplace are resulting from different activities and substances, i.e. different intermediate UVCBs. The measured metal concentrations are thus not related to the intermediate under study alone, and are, consequently, an overestimation.

Taking all the above into account, it can be concluded from this quantitative assessment that no inhalation risk is predicted when the risk management measures as indicated in the exposure scenario are applied.

Dermal contact with substances at the workplace is linked to workplace air levels (contact through deposition from air, and contact with contaminated surfaces). Direct contact (through e.g. immersion) is not relevant.

There are no direct data on dermal exposure. For the metals Pb, Cd and As, dermal exposure is integrated in the biomonitoring for these substances that is routinely performed at the plants. More importantly, it is noted that workplace concentrations of As and Cd are very low, as follows from table above. For the metal present in more significant levels, i.e. Pb, it is known that Pb is most easily taken up by inhalation or ingestion, and that dermal uptake is negligible in terms of systemic uptake, as compared to the other routes of exposure. So, according to the qualitative assessment, considering the elements above in combination with the very low exposure levels in the workplace air, no risks are predicted for dermal effects, neither. It is emphasised that workers constantly wear protective clothing, including special gloves.

B. Environment

For the environmental assessment of the intermediate, the metals contained in tables below are considered relevant. See also table 2.

Air emisions and soil risk characterisation

The emissions of metals to air are measured at two relevant stacks throughout the year, once a month. The average and 90P value for the year 2012 are given in table below.

The contribution of the emissions to the local PEC soil (regional PEC + local added concentration) were calculated for the metals zinc and cadmium. It is clear that at the observed level of emission, the contribution of the plant's emissions to the local soil PEC is minimal. The local PEC and related risk ratio is for the greater part related to the regional background.

Table 5.. Emission of metals to air, and risk characterisation for local soil.

Emissions	Cu	Pb	As	Zn	Cd	Sb
			n v rstar			

Annex – page 31 Publication Date: 2014-04-14 Date of Revision: 2017-10-24

mg/d						
average	10633.16	24543.19	12442.58	4389.618	4102.845	2785.014
90p PNECsoil	19634.13	37339.62	25971.93	14656.1	6350.479	5863.346
mg/kg _{dw}	88	147	0.3	107	0.9	
Risk ratio			0.005**	0.39*	0.82*	

^{*}At the given emission levels, the actual emissions contribute only marginaly to the soil exposure and risk ratio; the calculated risk ratio is entirely due to the regional background.

<u>In conclusion:</u> the contribution of emissions of relevant metals to air to the local PEC and risk ratio for (local) soil is minimal.

Water emissions and aquatic risk characterisation:

Metal levels in effluent water from the site (collecting process waters and surface run-off waters) were measured daily. Waste waters were first treated by sedimentation, followed by chemical purification. In table below, the results taken over the year (2012) are averaged, and the 90P, and 50P values are calculated, resp.

Table 6: Emissions of metals to water, resulting concentration in the receiving water and risk characterisation.

Discussion:

Based on the extensive monitored data, it can be concluded that for none of the main relevant metals, a risk is calculated for the water. When all risk ratios of the metals presented in table above are summed up, the sum is never near to 1 (sum of risk ratios based on average emission: 0.021; sum of risk ratios based on 90P values:0.032; based on 50P values: 0.019);

For the sediment, it is noted that no correction is done for bioavailability of Cd.

The endpoints STP (no emissions to STP), and marine waters/sediments (not located on coastal areas) are not relevant for the plant of this assessment.

<u>Further considerations</u>

Regional assessment

The data presented above demonstrate that the emissions related to the production and the use of the intermediate are very limited. Moreover, since the lifecycle of the intermediates is limited to their production and full use in industrial process, and since there are no downstream uses or wide dispersive consumer uses, the industrial releases to the environment are considered very limited, and insignificant for regional exposure/risk.

Man via the environment

Due to the limited emissions of the metals related to the production and use of the intermediate, and taking into account its short lifecycle, with production and use in only a small number of industrial sites in the EU, and, moreover, since there are no downstream or wide dispersive uses that may lead to significant further exposure through the environment, it is considered that the exposure to the metals contained in the intermediate via the environment is insignificant. The assessment of the exposure to the different metals is made in the respective chemical safety reports.
